ML4Microbiome

*STATISTICAL AND MACHINE LEARNING
TECHNIQUES IN HUMAN MICROBIOME
STUDIES*

RANDI J BERTELSEN, UNIVERSITY OF
BERGEN, NORWAY

TURKU, FINLAND AUGUST 2022

Aim & Objectives

To first optimize and then standardize best practice of statistical modelling and ML techniques for human microbiome research

- Evaluate how well existing ML methods address the specific challenges
- Establish benchmark datasets and online repositories – for the community to compare, optimize and develop ML method

Aim & Objectives

- First optimize and then standardize the use of ML => best-practice SOPs specific to various microbiome data types, human body sites & research questions;
- Investigate opportunities for automating the established SOPs into pipelines for translational use by clinicians and non-experts;
- Define priority areas for novel development of ML/stats applications targeting the microbiome

WG1

State-of-the-art evaluation & update

Jaak Truu, Estonia

- > “Tech watch”
- > Evaluate methods
- > Define priority areas of ML-Microbiome research

WG2

Establish benchmark datasets for testing

Leo Lahti, Finland

- > Agree data types
- > Public benchmark repository
- > DREAM Challenge

WG3

ML Optimization & standardization

(Magali Berland, France)

- > Optimize ML methods
- > Standardize their use
- > Investigate automation opportunities

WG4

Dissemination & training

Domenica D’elia, Italy

- > Disseminate results of WG1/2/3
- > Organize training courses for Action members & others
- > Maintain website, newsletters, social media

Action stats

Member countries: 34 (+ Israel)

COST Inclusiveness Target
Countries (ITCs): 19 (56%)

67 COST Action Management
Committee members

Slovakia

* Cooperating member
